Pollen Analysis (DIN10760 – Determination of the relative frequency of pollen)

Distribution of pollen of nectar producing plants (counted pollen grains..500 ..):

Brassica napus-Typ (rape-type) 43%, Prunus-Typ, Pyrus-Typ, Rubus-Typ (stone fruit-type, pomaceous fruit-type, raspberry-type) 34%, Salix (willow) 18%, Acer (maple) 3%, further see enclosure P

Pollen of non-nectar producing plants: see enclosure P

Foreign pollen grains (not corresponding with declared origin): none

Honeydew elements: few fungi spores

Other components of sediment: some crystalline mass, single starch grains

n.n. = not detectable

n.u. = not analyzed

Judgement:

The present honey comes from different nectar sources. The determined pollen spectrum gives no indications for a non-Danish origin.
